ALEKSANDRA JABLONSKA

07444 274597 | aleksandra.jablonska15@gmail.com | England, London W6 8BJ

PERSONAL SUMMARY

A highly motivated and hard-working **MSc Artificial Intelligence recent graduate** with a deep passion for **AI and Machine Learning** and previous professional experience, looking for a graduate position. Constantly growing and learning, always striving to achieve the best results and producing high-quality work. Driven by curiosity, quick to adapt to new settings, with strong communication, teamwork, and analytical skills. Speaking a few languages, with excellent time management and problem-solving abilities. Seeking a challenging role to further develop my technical and professional skills while contributing to the growth and success of a dynamic organisation.

EDUCATION

- **MSc Artificial Intelligence,. Master of Science** Loughborough University

Artificial Intelligence, Machine Learning, Robotics and Intelligent Systems, Programming for Specialist Applications, Computer Vision, Natural Language Processing, Research Methods, Artificial Intelligence Project

- **Bachelor of Science BSc(Hons) ITMB Information Technology Management for Business** Loughborough University

Data Mining and Machine Learning , Computer Systems, Software Engineering , Databases , Web Programming , Cryptography and Network Security , Accounting, Human Computer Interaction , Management of Human Resources , Quantitative Business Skills, Project Management

- **A-Levels (equivalent),** Liceum im. Tadeusza Reytana

- Advanced mathematics: **96% (100% pth)**
- Advanced Physics: 60% (84% pth)

OTHER POSITIONS OF RESPONSIBILITY

- **Scout Leader**
  - Jointly responsible for a twenty-member scout troop
  - Co-creation and implementation of the program, Allocating team tasks
  - Financial Management
- **Charity Action Leader**
  - Organised a charity event, helping individuals impacted by homelessness.

INTERESTS AND HOBBIES

Sport has always been a huge part of my life. When not studying or working, I focus on **running, fitness, skiing, surfing, hiking and sailing**. I used to take part in running as well as swimming competitions which affected my choice of the **world's best university for sports-related subjects**. It gives me the opportunity to constantly grow and learn as a person from academical as well as personal perspective. I also focus on **learning new languages** that I am constantly improving. I love travelling, meeting new people and learning about other cultures. **I believe that there is always more to learn and explore.**

SKILLS

- Programming - Python, JavaScript, Java, HTML, SQL, CSS,
- Building AI/ML models, Jupyter Notebook Pandas/ Numpy/ SciKit/ Matplotlib/ Seaborn, Conda Env, Flask , FastAPI, Solving classification and optimisation problems, model fine tuning
- Practical experience with ML platforms such as **Tensorflow/Keras, PyTorch**, etc.
- Experience with **data structures, algorithms. deep learning**
- Hands-on expertise with Generative AI (LLMs, prompt engineering, fine-tuning)
- Application Development, experience with **iOS SwiftUI** (Xcode)
- Understanding of SDLC phases, Experience with debugging and optimising code, automation.
- Microsoft 365 proficiency, Excel to Power BI, Power Automate and Power Apps, Figma
- Smart contract development for blockchains
- Strong **analytical skills,** with an ability to quickly identify scope and impact of issues during high-pressure situations, Experience in **Agile methodologies**
- Quick learner, **Attention to details**, Strong **communication and collaboration skills**

WORK EXPERIENCE

Application Developer & Power App Automation Engineer, Agilent Technologies, 1 year
Agilent supports scientists in 110 countries. It is a leader in life sciences, diagnostics and applied chemical markets company providing instruments, software and services.

- Managed **application development project** from start to completion, including planning, design and development.
- Converted company requirements into the Application, used by engineers across 14 countries based in **EMEA region**
- Used **Agile methodology** throughout the course of development
- Wrote and created clean, readable and testable code
- Utilised advanced **Power BI** features for data modelling and performance optimisation, Created Usage Tracking system, **Data Analysis**
- Power Apps Proficiency, experience with Powershell
- Identified opportunities for workflow automation.

RECENT PROJECTS

1. Computer Vision - Skin cancer Identification system
Designed, implemented and evaluated a computer vision-based system in Matlab, capable of discriminating images of malignant melanoma from benign skin lesions.

2. Machine Learning - ML solution to predict heart disease.
Designed and implemented ML pipeline, data visualisation, pre-processing, feature selection/ extraction, model selection/configuration, training, evaluation, visualisation

3. Integrating Blockchain and Artificial Intelligence for Fraud Detection in Decentralised finance

- Designed a full-stack fraud detection pipeline using AI models and a custom Transformer, focus on high-recall anomaly detection and explainability, Deployed via FastAPI backend, Solidity smart contracts (Hardhat, web3.py), and a React + MetaMask frontend, tested through synthetic fraud injection and GenAI fraud. Optimised for scalability on dataset exceeding 6M+ entries

4. Natural Language Processing (NLP) - Plagiarism Detection System
- Developed substring matching system utilising MinHash signatures for efficient text comparison.

- Created comprehensive analysis report incorporating a clearly formatted results table with core metrics including exact matches, average length, maximum length, and total matched content.
- Information Retrieval, Clustering, and Summarisation, Developed and tuned a Latent Semantic Indexing (LSI) and a Neural information retrieval modes.
